Summary

Fullstack developer with **3+ years** of commercial experience.
I build products end-to-end: frontend, backend, deployment, and infrastructure.
Stack: Go, React, TypeScript, PHP, PostgreSQL, Docker, Cloudflare.
Open to remote full-time and project-based work.

Stack

- Go (GORM, REST API)
- TypeScript
- PostgreSQL / MySQL
- Linux
- Git (GitHub, GitLab)
- PHP
- JavaScript
- Docker
- Cloudflare (WAF, Workers)
- Vite
- React
- Node.js
- Nginx
- DigitalOcean
- Tailwind CSS

Professional Experience

Fullstack & DevOps 06/2026 – 10/2026
Web3 Ecosystem (Freelance | NDA) Batumi, Georgia

- Developed and deployed a multilingual (RU/EN) domain lots showcase (React, TypeScript, i18n); achieved 95+ Google PageSpeed score through asset compression and lazy loading, and reduced project build time by 40%.
- Built an interactive Web3/AI application with 3D animations (Three.js/Canvas); optimized the WebGL scene and reduced CPU/GPU load by 30%, ensuring stable 60 FPS on mobile devices.
- Implemented comprehensive infrastructure protection (Cloudflare WAF, Bot Fight Mode, Rate Limiting): fully blocked common vulnerabilities (.env, .git, wp-admin) and successfully mitigated attacks, filtering out 421,000+ malicious requests (~98% bot traffic).
- Set up server-side logic on Cloudflare Workers, enabling 85% caching of static and analytical content and reducing direct load on the origin server (DigitalOcean) by 60%.

- Built a production server from scratch (Nginx, SSL, CI/CD builds, automated backups), prepared full deployment documentation, and handed over the project with zero downtime.

Fullstack Developer (Go | PHP | React | Postgres) 07/2023 – 05/2026
OOO "Gorodskaya Kabelnaya Set" (Urban Cable Network) Tyumen, Russia

- Developed a client portal and internal CRM on React (15,000+ DAU). Optimized rendering and scripts, improving key page load times by 35%.
- Designed and maintained REST APIs in PHP and Go for the billing system (50,000+ RPD).
- Optimized SQL queries and indexes in PostgreSQL (GORM), reducing execution time of heavy operations by 40% during peak loads.
- Built a Telegram bot from scratch in Go to automate on-call duties for 20+ engineers, reducing incident response time by 25%.
- Set up containerization and environments (Docker, Linux, Git).

Open Source Contributor 11/2025 – 04/2026
PixelDays — International Real-Time Collaborative Canvas Tyumen, Russia

- Implemented a CAPTCHA system against bots, reducing automated pixel drawing by 70%.
- Built a reporting and moderation system + admin panel with roles (moderator / admin / owner), replacing Discord-only moderation.
- Improved admin tools: ban/mute, CAPTCHA issuance by IID/UUID for bot checks, user and status management via server commands.
- Created Minimap — a fully redesigned reduced Earth canvas (palette, sizes, manual contour adjustments).
- Participated in legacy code migration to TypeScript, fixed 15+ bugs, and supported the community.

Education

Tyumen College of Industrial and Social Technologies (TKPST)

Specialty: Information Systems and Programming.

September 2023 – May 2026
