Summary

Fullstack developer with **3+ years** of commercial experience. I build products end-to-end: frontend, backend, deployment, and infrastructure. Experienced in high-load systems (50k+ RPD), microservices (gRPC), and cloud security.

Stack: **Go, React, TypeScript, PHP, PostgreSQL, Redis, Kafka, Docker, Kubernetes.** Open to remote full-time and project-based work. Willing to relocate globally (EU, UK, US, Asia).

Stack

Backend & Architecture
Go (Golang), PHP, REST API, gRPC, Microservices, WebSockets, Apache Kafka

Frontend
React, TypeScript, JavaScript, Tailwind CSS, Vite, *HTML5, CSS3*

DevOps & Infrastructure
Docker, Kubernetes (K8s), CI/CD, Nginx, Linux, Prometheus / Grafana

Cloud & Security
Cloudflare (WAF, Workers), DigitalOcean

Databases
PostgreSQL, MySQL, Redis

Professional Experience

— **Fullstack & DevOps** 06/2026 – 10/2026
Web3 Ecosystem (OSECORP LLC) Batumi, Georgia

- Architected and deployed a multilingual (RU/EN) domain lots showcase (React, TypeScript, i18n), achieving a **95+ Google PageSpeed score** and reducing build time by **40%**.
- Engineered an interactive Web3/AI application with 3D animations (Three.js/Canvas); optimized WebGL rendering to reduce CPU/GPU load by **30%** and maintain **stable 60 FPS** on mobile devices.
- Implemented comprehensive infrastructure security (**Cloudflare WAF, Rate Limiting**), successfully mitigating DDoS attempts and filtering out **421,000+ malicious requests**.
- Developed server-side logic using **Cloudflare Workers** for edge caching, reducing origin server (DigitalOcean) load by **60%**.

- Configured a production server from scratch (**Nginx, SSL, Docker, CI/CD**) and set up **Prometheus/Grafana monitoring** for zero-downtime deployment.
- Integrated payment gateways (**Stripe, YooKassa**) for subscription payments, including secure webhook handling and automated access provisioning.

— Fullstack Developer (Go | PHP | React | Postgres) 07/2023 – 05/2026
OOO "Gorodskaya Kabelnaya Set" (Internet Service Provider) Tyumen, Russia

- Developed a client portal and internal CRM for an **ISP with 15,000+ active subscribers** (React), improving key page load times by **35%**.
- Designed and maintained REST APIs in **PHP and Go** for the billing system, handling **50,000+ requests per day (RPD)**.
- Utilized **Apache Kafka** for asynchronous event processing (billing webhooks, SMS notifications), decoupling heavy background tasks from the main API.
- Implemented **Redis caching** for high-frequency queries and session storage, reducing **PostgreSQL load by 25%**.
- Optimized complex SQL queries and indexes in **PostgreSQL (GORM)**, reducing heavy query execution time by **40%**.
- Built a **Telegram bot** from scratch in Go to automate on-call duties for 20+ field engineers, reducing **incident response time by 25%**.
- Managed containerization and environments (**Docker, Linux, Git**) for seamless deployment across staging and production.

— Open Source Contributor 11/2025 – 04/2026
PixelDays - International Real-Time Collaborative Canvas Tyumen, Russia

- Acted as a **core contributor** in a small team, taking ownership of **critical infrastructure security** and participating in backend architecture discussions.
- Engineered and integrated a custom **CAPTCHA service (Go)** to mitigate automated bot traffic, successfully reducing bot pixel placement by **70%**.
- Implemented **robust anti-bot middleware** (rate-limiting, token validation) to protect API and WebSocket endpoints from malicious abuse.
- Led the progressive migration of legacy modules to **TypeScript**, improving type safety and reducing runtime errors.
- Designed and developed a comprehensive **moderation and reporting system** with role-based access control (admin / moderator / owner).
- Collaborated on application containerization (**Docker**), ensuring consistent environments for staging and local development.

Education

Tyumen College of Industrial and Social Technologies (TKPST)

Specialty: Information Systems and Programming.

September 2023 – May 2026
